EDUCATION

The University of Texas at Austin, Austin, TX

May 2024

Bachelor of Science (B.S.), Electrical and Computer Engineering - GPA: 3.62

SKILLS/CERTIFICATIONS

Technical/Computer Skills: AWS, REST API, Kubernetes, PostgreSQL, API Development, Prompt Engineering, OAuth/JWT

Programming Languages: C#/.NET, JavaScript/Typescript, Angular, SQL, Python, C/C++, Java, R

Certifications: AWS Cloud Practitioner, Google Data Analytics Certificate

EXPERIENCE

LPL Financial - Engineer I - Software Developer, Fort Mill, SC

July 2024 - Present

- Built the first in-house banking solution to allow 120+ users to open Cash Management Accounts with LPL daily
- Developed 7 REST .NET APIs to process and update data used to structure operations for 7 domains and 4 vendors
- Deployed containerized APIs on AWS EKS using layered authentication methods to enable access to 3 sets of services
- Integrated 4 new Angular UIs into an existing web enterprise platform for check, debit card, and bill pay enrollment
- Automated 2 nightly batch jobs by utilizing AWS to transmit order data for 30k+ clients to external vendor systems
- Organized 5 early career events, 2 university hackathons, and the new hire bootcamp for the Tech Associate Program

PrivacyCheck - UT Center for Identity, Austin, TX

August 2023 - May 2024

- Developed a Python-based AI tool to analyze and score privacy policies across 100+ companies for GDPR compliance
- Trained an LLM system using GDPR and cybersecurity frameworks to assess compliance and transparency levels
- Benchmarked 16 legacy ML models against GDPR requirements to evaluate Gemini's compliance accuracy
- Engineered Gemini prompts to deliver scalable and replicable GDPR compliance scoring with ~80% accuracy

Human Signals Lab at UT Austin - Undergraduate Research Assistant, Austin, TX

September 2022 - July 2023

- Conducted Longitudinal/Expertise data collection on various jugglers using accelerometer AppleWatch technology
- Annotated datasets to identify human activity on data to test LAPNet-HAR model's ability to detect various skill levels
- Generated Python script to analyze behaviors of previously trained models on down-sampled juggling data

PROJECTS

Spotify Controller - github.com/JakeLev01/SpotifyController

May 2023 - July 2023

- Created a Spotify session application, connecting to Spotify API, enabling real-time music playback and user controls
- Integrated Django for authentication and API management using serializers, ensuring a seamless user experience
- Engineered an intuitive UI with React.js and employed version control with Github to maintain codebase changes

Hardware Checkout Application - github.com/JakeLev01/461LGopherRats

February 2023 - May 2023

- Developed a Hardware-as-a-Service project, focusing on the backend and database management using Pymongo
- Implemented database design on MongoDB to manage user authentication and project data, ensuring data security
- Utilized Python Flask to communicate with the React.js frontend, ensuring seamless and efficient integration

Android Weather App - github.com/JakeLev01/AndroidWeatherApp

May 2022

- Designed a weather app for Android using Java/XML in Android Studio, showcasing real-time weather data for Austin
- Leveraged threading in Java to optimize REST API calls, ensuring the application had up-to-date weather information
- Demonstrated proficiency with XML by designing dynamic frontend components that extracted data from API calls

LEADERSHIP AND INVOLVEMENT

Student Engineering Council - Service Director, Austin, TX

April 2023 - May 2024

- Coordinated operations for a food drive event, eclipsing \$6000 worth of funds raised for the Central Texas Food Bank
- Organized a Casino Night event for Engineering students that raised \$4000 for The Arc of the Capital Area in Austin
- Created 10 volunteering opportunities with Keep Austin Beautiful and Helping Hand Home for engineering students
